How Involuntary Out-of-Network Medical Bills Harm New Jersey Consumers

JUNE 2016
1. WHAT ARE ‘INVOLUNTARY OUT-OF-NETWORK MEDICAL BILLS?’

Let’s take a look:
INVOLUNTARY OUT-OF-NETWORK MEDICAL BILLS:

▸ These are surprise bills that consumers receive because a provider wasn’t in their insurer’s network.

▸ They also include out-of-network providers who bill insurers at excessive rates when the consumer is held harmless under state rules.

▸ These are not bills for consumers who choose to go out-of-network at their own expense, or bills for unexpected costs in-network.
INVOLUNTARY OUT-OF-NETWORK MEDICAL BILLS – IMPACT:

- Surprise bills can result in financial stress or even crisis for families.
- Even when protected from paying surprise bills under state rules, consumers can pay more in deductibles and premiums.
- Some consumers choose not to obtain necessary care due to fear of surprise bills.
- Surprise billing wastes resources on needless litigation, appeals and paperwork, driving up costs for providers and insurers.
THESE BILLS COST NEW JERSEYANS ABOUT $1 BILLION A YEAR

DIRECT COSTS:

▸ Estimated number of New Jerseyans receiving OON bills each year: 168,000
▸ Estimated total owed by these consumers: $420 million
▸ Average bill received: $2,500

see final slide for methodology
THESE BILLS COST NEW JERSEYANS ABOUT $1 BILLION A YEAR

INDIRECT COSTS:

▸ Estimated number of New Jerseyans paying more for their insurance due to excessive OON bills to insurers: up to 5 million

▸ Estimated total paid as a result: up to $956 million a year

see final slide for methodology
MOST WHO RECEIVE THESE CHARGES DIDN’T KNOW THEY WERE COMING

Percent of People Who Did Not Know Provider Was OON Who Received an OON Bill

MANY NEW JERSEYANS AREN’T PROTECTED AGAINST THESE CHARGES

Distribution of all New Jerseyans by Type of Insurance

- Self-insured Employer-based Not Regulated by State, 3,804,225
- Over 65 (mostly Medicare), 1,255,443
- NJ FamilyCare, 1,358,919
- Direct Purchase and Other, 469,000
- Uninsured, 965,411
- State/Local Employees, 428,000
- Small Employers, 521,000

About 1.4 million New Jerseyans are protected from paying these bills, but insurers still must pay these bills, and they end up passing along the costs - in the form of higher premiums - to all policyholders.

A small number of providers and hospitals exploit this consumer protection by deliberately going out-of-network in order to submit exorbitant charges directly to insurers.
Mostly as a result of these charges to insurers, up to 5 million New Jerseyans with commercial insurance end up paying about $1 billion more in additional premiums.

Changing the law to eliminate exorbitant OON charges by providers could significantly reduce premiums for millions of New Jerseyans.
MANY OON CHARGES TO INSURERS ARE CLEARLY OUT OF LINE

SOURCE: American Community Survey, 2014
METHODOLOGY

The estimate in slide 4 for the number of consumers receiving involuntary OON bills was calculated by applying the percent of persons who fell in that category according to Consumer Reports’ National Research Center’s Surprise Medical Bill Survey, May 5, 2015, which was applied to the total number of consumers in the NJ commercial market and adjusted downward to take into account that consumers are protected from such billing in the state regulated commercial market (individual and small group market as well as state and local employees).

The total estimated bills received by consumers directly was calculated by multiplying the above number times the midpoint of average medical bills received by persons who were having a problem paying medical bills as reported in The Burden of Medical Debt: Results from the Kaiser Family Foundation/New York Times Medical Bill Survey, January 2016. This national estimate was within the range of OON bills that New Jerseyans reported in the above Consumer Reports survey.

The estimate for the number of New Jerseyans affected by indirect costs that are passed on to them by insurers who must pay for certain OON charges they receive represents the entire commercial market in New Jersey as estimated by the US Census American Community Survey, 2014 which is consistent with the approach taken in the Avalere report below.

The estimated amount that New Jerseyans are paying more in premiums and other cost sharing as a result of those charges to insurers was determined by increasing the estimate for such costs to Horizon in New Jersey that was produced in An Analysis of Policy for Involuntary Out-of-Network Charges in New Jersey by Avalere, March 2015 to take into account that policyholders covered by Horizon (Blue Cross Blue Shield) only represents 52 percent of the New Jersey commercial market according to the Kaiser Family Foundation, Market Share and Enrollment of Largest Three Insurers- Large Group Market, 2012-13.
